Progress Presentation-I

e-Yantra Summer Intership-2017

Comparison Study of Traditional Way of Programming Firebird with the Statechart Based Model of Programming

Manav Guglani
Mentor: Naveen C

IIT Bombay

June 5, 2017

Overview of Project

- Project Name:- Comparison Study of Traditional Way of Programming Firebird with the Statechart Based Model of Programming
- Objective
  1. Modelling of robotic themes using statecharts
  2. Platform independent code generation
  3. Comparison study
- Deliverables
  1. Statechart models for various tasks
  2. Report containing comparison study

Overview of Task

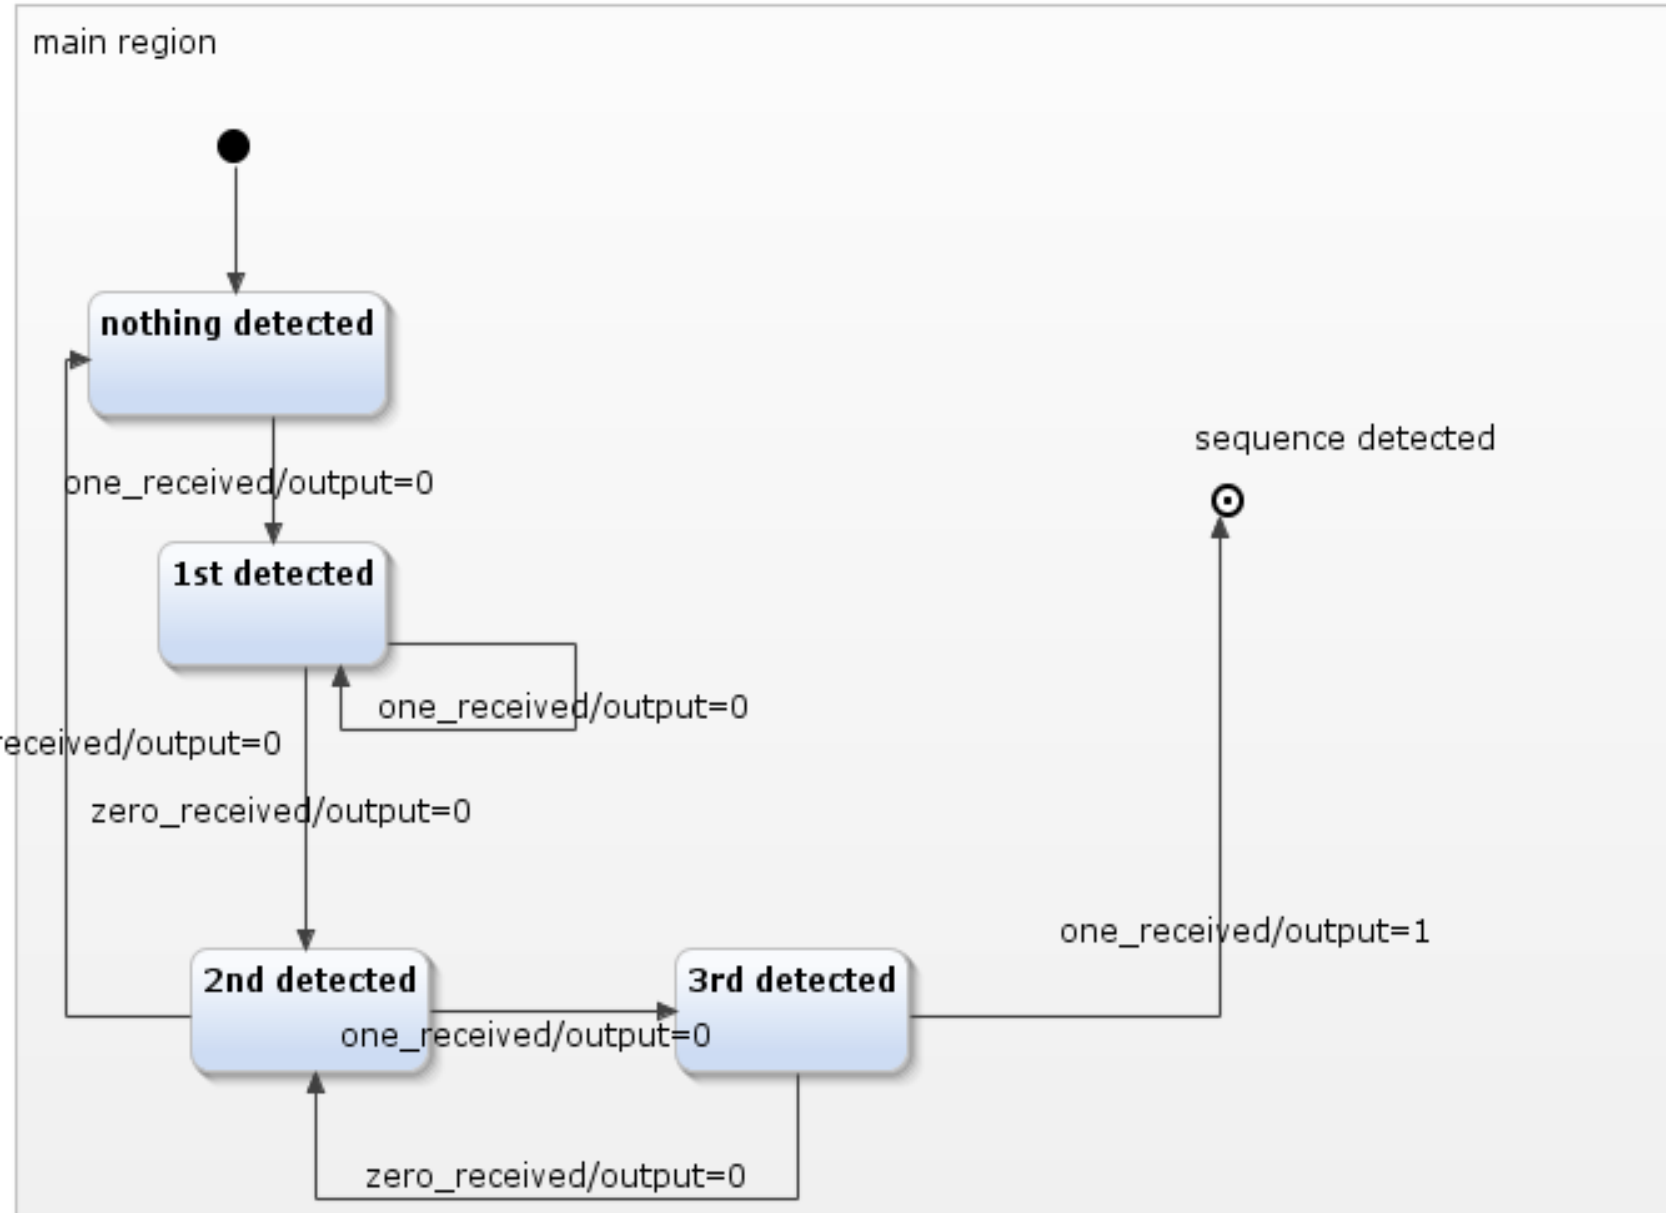
Table: overview of tasks

Task no.	Task	deadline
1	Learn Syntax and Semantics of Statecharts asdescribed by David Harel.	Syntax
2	Understanding the existing standard statechartmodels of some systems.	3 days
3	Model some of the tasks given to students in e-yantra competition using statecharts.	10 days
4	Explore the statechart Editor tools Yakindu and KSE.	2 days
5	Model the tasks using Yakindu and integrate withfirebird libraries	4 days
6	Writing the same code manually for the respectiverobotic tasks	12-14 days
7	Compare the cycle time for Manually written code andYakindu generated code.	1 day
8	Comment on how to make the yakindu generated codeefficient and how to make the software componentsreusable	3 days
9	Report and presentation	4 days

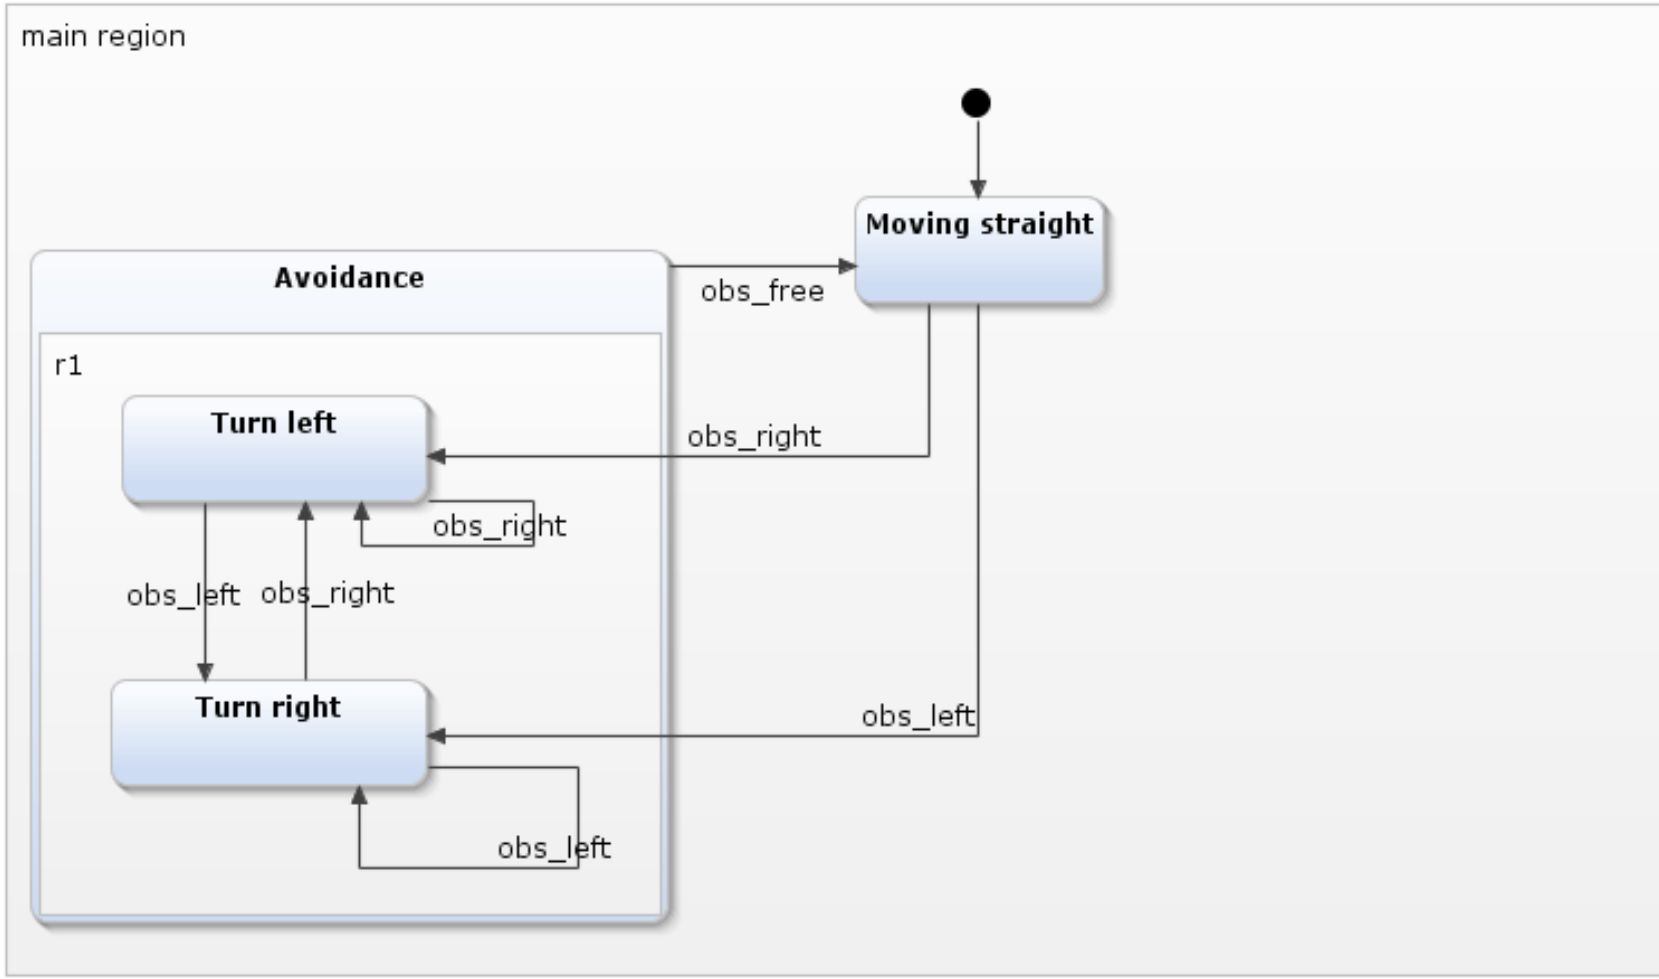
Task Accomplised

- Learned Syntax and Semantics of Statecharts as described in David Harel's paper
  1. clustering
  2. orthogonality
  3. broadcast communication
- understood some of the existing statechart models
  1. Line follower robot
  2. Obstacle avoider robot
  3. Citizen Quartz Multi-Alarm III wristwatch
- Explored statechart editor tool Yukindu. (made some models in it).

sequence detector - 1011



obstacle avoider



Challenges Faced

- Understanding the statechart model of the watch given in David Harel's paper. (Contains lots of clustered states and orthogonal states with a lot of nesting and dependencies).

Future Plans for presentation 2

- Modelling some of the tasks given to students in e-yantra competition using statecharts.
- Modelling the tasks using Yakindu and integrate with firebird libraries

Thank You

THANK YOU !!!
