Thank You

- Project Name:- Comparison Study of Traditional Way of Programming Firebird with the Statechart Based Model of Programming
- Objective
  - 1 Modelling of robotic themes using statecharts
  - 2 Platform independent code generation
  - 3 Comparison study
- Deliverables
  - 1 Statechart models for various tasks
  - 2 Report containing comparison study

Table: Timeline

Task no.	Task	Deadline
1	Learn Syntax and Semantics of Statecharts asdescribed by David Harel.	3 days
2	Understanding the existing standard statechart models of some systems.	3 days
3	Model some of the tasks given to students in e-yantra competition using statecharts.	10 days
4	Explore the statechart Editor tool Yakindu.	2 days
5	Model the tasks using Yakindu and integrate with firebird libraries	4 days
6	Writing the same code manually for the respective robotic tasks	12-14 days
7	Compare the cycle time for Manually written code and Yakindu generated code.	1 day
8	Comment on how to make the yakindu generated code efficient and how to make the software components reusable	3 days
9	Report and presentation	4 days

Project

Overview of Task

Task Accomplished

Challenges Faced

Future Plans

Thank You

- Learned Syntax and Semantics of Statecharts as described in David Harel's paper
  - 1 Clustering
  - 2 Orthogonality
  - 3 Broadcast Communication
- understood some of the existing statechart models
  - 1 Line follower robot
  - 2 Obstacle avoider robot
  - 3 Citizen Quartz Multi-Alarm III wristwatch
  - 4 Valet Parking
- Explored statechart editor tool Yakindu. (made some models in it).

Overview of  
Project

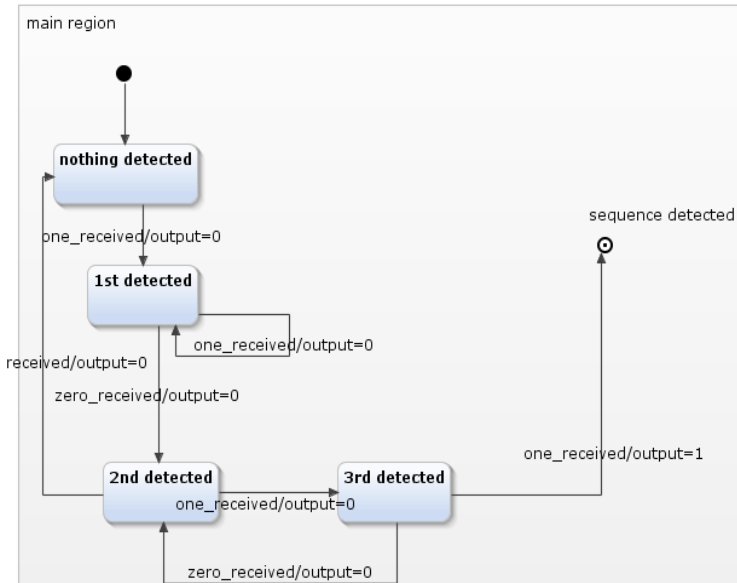

Overview of Task

Task Accomplished

Challenges Faced

Future Plans

Thank You

- Understanding the statechart model of the watch given in David Harel's paper. (Contains lots of clustered states and orthogonal states with a lot of nesting and dependencies).

# Future Plans for presentation 2
